Dear Don,

- Yes, we couldn't have realized earlier but thanks to the pointer in your email. We observed that README file got automatically converted into unknown format while uploading it on cloud to be downloaded. This happened in the process of uploading files from Windows machine to Google Drive and then back to Mac OSX and finally to Dropbox.

>> We are attaching the README file here (in .doc and .pdf format) with this mail.

- Info on path of the RoR source and the database required

>> The path of the RoR source codes :   ProjectBackUpForDon/boyscoutpostgres/app
    The path of the database   :   ProjectBackUpForDon/boyscoutpostgres/db
    The same has been included in the attached README file too.

- In case, anything from submitted folder or any instruction from README is not clear.

>> We believe README has the required steps and pointers to set up / work with the application, but we understand we might not have presented instructions very well or worked with certain assumptions.
We suggest, if required, kindly feel free to let us know your convenient time for brief Skype / general call at any part of the day and we could give you a quick walkthrough of files and answer any application related questions if you have.

- Lastly, could there be any other project file which is lost in translation with Windows, OSX, and Google drive.

>> We probably believe other files are all in place as expected. But just in case if you would like to have an original project folder copy (before uploading project zip folder on cloud drive), we would do that as well through flash-drive.

<u>Please feel free to shoot any unclear concerns to us. We are committed to have our client satisfied with our application's final delivery.</u>

Thanks,
Roy

Dear Mr. Don,

Thank you for your your time on last Friday. We are grateful to you for your complementing and encouraging words for the team Firefox in the final project video.

We would like to provide you with the final folder having all source codes, documentations & manual related to this Boy Scouts project. Due to heavy size of the complete project folder, we suggest you may download the zip file using from Dropbox, using the link given below,
https://www.dropbox.com/s/2fqj65wark1b6so/ProjectBackUpForDon.zip?dl=0
If you find the work satisfactory could you please reply in as your "acknowledgement" for the same.

Though we have tried to give our best in the development of this project and tested all the files before making a submission, but due to having limited time and competing assignment submissions in other courses, few of the trivial issues may have got unnoticed unintentionally. We hope that in times to come this project would become a major success. Once again, the team Firefox is very much thankful to you for providing us the opportunity to learn and develop our skills and also, we highly appreciate your great understanding and consistent support.

Hope we'll will stay in touch through professional social medium link LinkedIn, emails, etc.

Thanks,
Roy
